

The **Laundry Jet Remote** is our most affordable, adaptable, and flexible system to date, with the **Remote Eco** serving as the entry-level model. It connects to any low-voltage Laundry Jet ports and is fully compatible with Return Units. By relocating the motor to a remote location—such as an attic, garage, or exterior space—noise within the laundry room, kitchen, or living area is kept to an absolute minimum.

A smart retrofit **top-plate adaptor and sealing kit** converts virtually any standard or custom laundry cabinet into a fully enclosed, concealed laundry receiver. Clothes, towels, and bedding are collected neatly inside the cabinet until ready to be emptied directly into the washer, eliminating laundry baskets and countertop clutter.

The Remote Eco still delivers impressive performance, generating powerful airflow capable of transporting laundry at speeds of up to **50 mph**, over distances of up to **150 ft (48 m)** from the furthest port to the closed cabinet.

Tech Data

Ports - Lift, Slide LV

Uses an existing Laundry room or kitchen cabinet

Remote mounted Power unit e.g. Attic or garage

Standard plug 110/120 US or Int.220/240V

Manually empty your cabinet when full
